

New pile attachment

The Expotech "Multiplier" is a versatile piece of equipment that eliminates the need for much of the equipment normally associated with a piling job. The excavator mounted vibratory piling hammer is quick and easy to install onto an excavator and then revert back to the bucket.

The unique side clamps mean that the problem of low headroom job sites is easily overcome, plus the multiplier can drive and extract piles of up to 12 meters.

Sheet piles and H-beams can be installed with little or no guide frames, which is particularly important on sites where access is at a premium. Tubular piles can also be installed with special adaptation. The Multiplier is also able to extract piles and lay them horizontally onto truck or ground.

The Multiplier is available for hire or sale through Steelcom Pty Ltd, for more information contact 02 9954 9166.
